MAIL STOP AMENDMENT
P. O. Box 1450
Alexandria, VA 22313-1450

A

AMENDMENT

Sir:

In response to the Office Action of September 23, 2004, please amend the above-identified application as follows:

Amendments to the Claims are reflected in the listing of claims which begins on page 2 of this paper.

Remarks begin on page 12 of this paper.

A 3-month Petition for Extension of Time is submitted herewith.

APR 20 2006

print means connected to the control means, the print means printing data on print media in response to receiving commands from the control means, wherein:

the control means is responsive to the one or more printerlets for causing at least one object oriented class to be invoked for processing the data;

the control means processes the data as a function of the invoked object oriented class; and

the control means issues commands to the print means as a function of the processing of the data.

13. (currently amended): ~~The printer as set forth in claim 12, wherein:~~

A printer connectable to one or more computers, the printer comprising:

control means connected to one or more computers for receiving therefrom one or more printerlets and data;

computer storage means connected to the control means and storing therein a plurality of object oriented classes invocable by the control means, each object oriented class configured to control at least one operation of the printer; and

print means connected to the control means, the print means printing data on print media in response to receiving commands from the control means, wherein:

the control means is responsive to the one or more printerlets for causing at least one object oriented class to be invoked for processing the data;

the control means processes the data as a function of the invoked object oriented class;

the control means issues commands to the print means as a function of the processing of the data;

the control means invokes a port monitor class which monitors for incoming data including printerlets and data;

in response to detecting a printerlet in the incoming data, the port monitor class causes the control means to invoke an interpreter for interpreting the printerlet;
